Experience Education

Real Odors in a Virtual World

Realistic Environments

MISSION:

Train Flight Attendants to identify & respond to odors, smoke & fumes in a realistic environment while eliminating logistical issues and increasing the quality of the training.

- **Train for hazardous situations in VR limiting risks to health and safety.**

- **Experience education like never before through immersion - increased training quality & retention.**

- **Practice in realistic environments building muscle memory - quicker response times in emergencies.**

- **Multiple users can access training anywhere in the world - eliminating costly logistical issues.**

- **One trainer can connect with multiple users at once – better consistency to training quality.**

- **Easy set up, small footprint, continued support and completely ADA compliant.**

- **Mitigate costs associated with flight delays & diversions due to odors / smoke / fumes.**
